# Facts About Gluten-Free Eating

#### What Is Gluten?

Gluten is a protein naturally found in certain grains such as wheat, barley, rye and some oats. Foods that are made with these grains also contain gluten – that includes foods like bagels, breads, cakes, cereals, cookies, crackers, pasta, pizza, and more.

#### Who Should Avoid Gluten?

About three million Americans suffer from a serious medical condition called celiac disease. For someone with this disease, eating gluten-containing foods causes damage to the lining of the small intestine (where foods go after they have been eaten and digested). This damage makes it very difficult for the body to absorb nutrients from foods. Over time this damage can lead to malnourishment and possibly other complications. While there is no cure for celiac disease, the good news is that eating gluten free is the best way to prevent further damage to the small intestine. Gluten may also be avoided by those who are sensitive to it or make a personal choice to avoid it. If you think you have celiac disease, be sure to get tested before starting a gluten free diet.

## **Health Gluten-Free Eating**

Many foods are generally free of gluten, unless it was added in processing. People who follow a gluten-free diet can enjoy a variety of foods, including:

- Plain beef, pork and lamb
- Plain fish and shellfish
- Plain chicken and turkey
- Plain fruits
- Plain vegetables
- Plain beans
- Eggs
- Milk

- Rice, Wild Rice
- Quinoa
- Lentils
- Corn
- Potatoes
- Sov
- Nuts and seeds
- Flax

#### **DID YOU KNOW?**

One out of every 133 people in the US has celiac disease.

Celiac disease runs
in families. Children
and siblings of
someone with celiac
disease often
develop the disorder.

There are more than 20,000 gluten free foods in US grocery stores!

# **Knowing What To Look For: Reading Labels**

The best way to know if a product is gluten free is to read the ingredients label. To determine if a product contains gluten, there are four key grains to look for:

- Wheat
- Barlev
- Rve
- Oats¹

In addition to these grains, look for these two ingredients:

- Malt<sup>2</sup>
- Brewer's Yeast

Looking for these grains and ingredients will help you identify products that contain gluten. You need to check labels often. Ingredients can change over time, so checking the ingredients label every time is the most accurate way to identify what is in a food or beverage product. After you have read the label and determined that the product does not contain these obvious sources of gluten, you may always contact the manufacturer to confirm.

# Frequently Overlooked Foods That May Contain Gluten

- Broth
- Candy
- Coating mixes
- Croutons
- Imitation bacon
- Imitation seafood
- Marinades
- Processed meats
- Sauces and gravies
- Seasoning
- Soy sauce
- Thickeners
- Vegetarian meat substitutes

INGREDIENTS: WHOLE GRAIN WHEAT SUGAR, CORN SYRUP, SALT, DISTILLED MONO-GLYCERIDES, ANNATTO EXTRACT COLOR, NONFAT MILK. BHT ADDED TO PRESERVE FRESHNESS. VITAMINS AND MINERALS: CALCIUM

VITAMINS AND MINERALS: CALCIUM
CABBONATE, VITAMIN C (SODIUM ASCORBATE).
ZINC AND IRON (MINERAL NUTRIENTS),
